

Engineering Lead @ VocaliD

Location: Boston, MA
Available: Immediately

About VocaliD:

VocaliD creates AI voices with personality for applications that talk. Our products and services leverage the team's expertise in speech processing, machine learning and UX design to improve the ease, efficiency and creative flow involved in bringing content to life through voice.

Our company is built on innovation, credibility, respect, and grit. Our [founder's vision](#) of enabling every voice to be heard is at the heart of our ethos, whether our voices are used by those with speech impairments or companies that want to elevate their customers' voice interaction experience.

We're looking for a full stack engineer to work hand-in-hand with the CEO and the engineering and product teams to build, maintain and extend our tech stack and features. As a core member, we also envision your work will have major impact on shaping our culture and brand to attract top talent and to become an industry leader in Voice tech. We are seeking candidates that genuinely enjoy the excitement and energy of early-stage startups. If you are a creative problem solver with strong communication and team building skills with a proven track record of software development and productization ready for your next challenge, this pivotal role would be a great fit.

General Responsibilities:

- Optimize product quality, performance, security, scalability and infrastructure
- Enhance voice building pipeline, optimize AWS deployments and develop web-based products
- Contribute to translating customer needs into product roadmap
- Collaborate with CEO to help build a world-class engineering team

Technical Proficiency Requirements:

- 5+ Years experience as a Full Stack/DevOps engineer
- Ability to lead projects and execute with pragmatism and velocity
- Deploy and secure infrastructure on AWS
- Relational database schema design & query authoring (e.g. PostgreSQL, MySQL)
- Containerization (e.g. Docker, Kubernetes)
- Infrastructure as code (e.g. Cloudformation, Terraform, etc ...)
- Asynchronous background task management (e.g. Message queues & task queues)

Additional assets:

- Previous startup experience
- Passionate about Voice Tech and VocaliD's vision
- Web app backend paradigms and frameworks (e.g. Kotlin, Django/Flask, Node.js)
- Single-page app client frameworks (e.g. React, AngularJS, Meteor, etc...)
- Experience with iOS or Android App development

Our Stack:

Python | Kotlin | React | Django/Flask | PostgreSQL | AWS (ECS, S3) | Android, iOS & Windows Apps

We are an equal opportunity employer and offer competitive compensation with equity, commensurate with experience. Please submit a cover letter & resume to rupal@vocalid.ai; Visit us at www.vocalid.ai for more information about VocaliD.
